• Even when screen display is rotated, the app is not going on full screen.

• The app format size is not 1920x1080px

• The idea of this page was to login the twitter credential of the developer account used. Imagine that the account that we are using is blocked (by twitter, for any reason) during a live event. The idea here is to create other developer accounts that we can just add their information and have the campaign continue to work. As it is now, it's to create normal accounts to use the app, which is not very useful.

 We can unify the password to make it ThinkTank or 12345678 the purpose of this is for no one without the password to mess with the settings

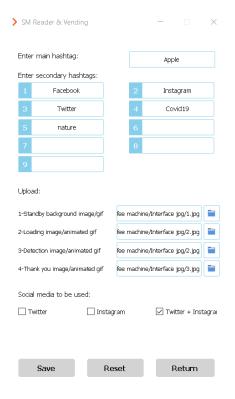

Set-up page

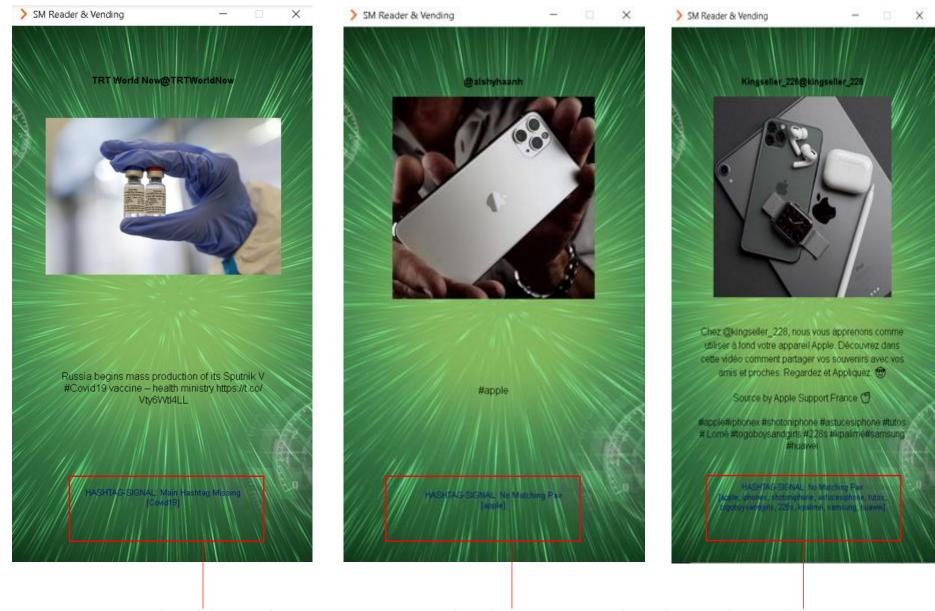

- This looks good, it's working in Arabic too, good job
- Let's add a button asking if we want to run the campaign with
 - ► 2 Hashtags (main and secondary)
 - ▶1 hastag (only main)

For now this presentation contains feedback only for the scenario where 2 hashtags are used (main and secondary)

SIVI Keader & Vendin	g		_		X
Enter main hashtag:					
Enter secondary hash	tags:				
1		2			
3		4			
5		6			
7		8			
9					
Upload:					
1-Standby background image/gif					
2-Loading image/animated gif					
3-Detection image/animated gif					
4-Thank you image/animated gif					
Social media to be used:					
Twitter Instagram			Twitt	ter + Inst	agrai
Save	Reset	Reset		Return	

Test 1

App should not show or register in database tweets that do not have the 2 hashtags (Main and secondary)

Test 2

Working scenario, Good

• Observation: If we notice a tweet containing the main hashtag and multiple secondary hashtags only report the key related to the first secondary hashtag.

For example in this scenario, if we received a tweet containing #test0 #test2 #test5 I noticed that we are sending a signal for "B" and "E" We need to modify this to only receive signal B

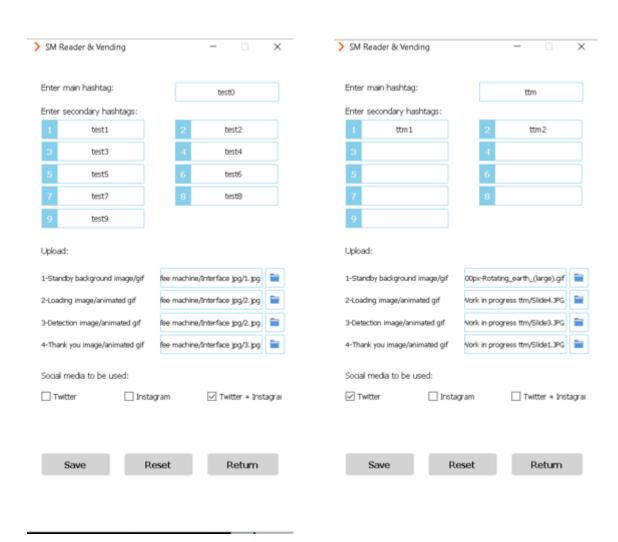

• Obviously knowing that these are very popular hashtags I received lots of tweets however, the software only showed me the "Thank you" page after the first one. It is important to show the thank you page after each one as this is the time needed by the machine to distribute the gift

Gif animations did not work on the app

- I tried tweeting using these, it did not work.
- Any thoughts on why?

• Once we run the campaign, it takes about a full minute for the 1st tweet to appear can we reduce this time?

User experience

- While any campaign is running, we should be able to
- press X to see the specs of the campaign same as this to refer to it and modify anything that needs fixing
- Press P to pause the campaign from retrieving hashtags and P again to resume
- Press Q to stop the campaign and return to main page
